DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 07/23/2006 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 30-32 rejected under 35 U.S.C. 102(e) as being anticipated by Lin et al. (20020058409).

Lin teaches a method of fabricating an integrated circuit, comprising a process typically results in a liner/barrier (110,214) or seed (112) layer having thicker overhang

Art Unit: 1765

portion (111) at the upper corners of a trench (108), via (106), or contact (212). A post deposition sputter etch using low bias is used to reduce the thickness of the overhang portion (111) and avoid a seam in a subsequent fill process. (See abstract.) Lin teaches the trench (206) is etched, and illustrates the patterning provides a bottom, sidewalls, and mouth (see figures 1 and 2A). Lin teaches, in figure 2D, the filling of the trench (124).

As for claim 31, Lin et al. teaches a seed layer deposited over a barrier (see para. 22).

As for claim 32, Lin et al. teaches barrier layers may be Ta, TaN, TiN, and WN (see para. 21).

Allowable Subject Matter

Claims 9-13, 28, and 29 are allowable. The following is an examiner's statement of reasons for allowance: Applicants have overcome an obviousness-type double patenting rejection of claims 9-12 by submitting a terminal disclaimer under 37 CFR 1.321, therefore claims 9-12, and all claims depending on them are allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
